

Questions regarding the Dune Construction proposed by Friends of Squibnocket-LLC

- What are costs (including property takings)?
- What are advantages/disadvantages of roadway on top of vs. behind the dune?
- How high is the dune above the exiting parking lot?
- Basis for setting elevation of top of dune?
- What is the width of the top of the dune? Width at base?
- How much material will be required to construct dune? (CY's and truckloads). Will it be trucked in or pumped from the ocean?
- If trucked in, what are consequences on existing roads and on neighbors?
- How often would dune need to be "refreshed" and/ or moved inland? (Costs?).
- Examples of constructed dune roadways) with conditions similar to Squibnocket? (in addition to Duxbury). What makes Duxbury location similar to or different from Squibnocket?
- Maintenance history of similar dunes at other locations?
- Will there be any damaging consequences from storm surges on areas adjacent to the artificial dune, which is a dam and prohibits the flow of water through the area?
