### CIP-1&2 Info Sheet

#### CIP 1-

Project Title: Heat Pump Mini Splits

Estimated Project Cost: \$60,000

FY25 Request- \$30,000

FY26-30 Request-\$30,000

#### CIP 2-

Project description- Replacement of two mini split cooling systems manufactured in 2008 and are at the end of their life expectancy. Currently the mini splits are only capable of cooling. Installation of heat pump mini splits could cool, dehumidify and provide supplemental heat to the building. The building which was built in 1850 is currently heated with an oil-fired boiler that is in excess of 35 years old. A 2019 RISE Engineering Report suggested replacing the boiler with all heat pump mini splits, this would require a more detailed assessment of how many heat pump mini splits this would require. I have requested RISE do a more up to date survey on the building which is 173 years old. Replacement of these mini splits is in accordance with the town's goals of lowering our use of fossil fuels and increasing our energy system resilience. I do believe there are incentives provided by Cape Light Compact that would significantly offset some of the cost of the replacements.
